

I am planning to develop an **online marketplace website** that allows small business owners to sell their products through individual online stores created on my platform.

Below are the key requirements for the website:

1. User Roles / Access Levels

The website should have **three types of user access**:

1. Admin (Platform Owner)

- Full access to manage the entire platform
- View all sales figures and transaction history
- Manage sellers and their stores
- Manage commissions and memberships
- Access reports and analytics

2. Seller (Store Owner)

- Ability to create and manage their own online store
- Add, edit, and remove products
- Upload product images, descriptions, and pricing
- Manage product availability
- Choose payment options (Cash on Delivery or Card Payment)
- View their sales and order history

3. Customer (Buyer)

- Browse stores and products
- Add items to cart
- Purchase using:
 - Cash on Delivery (COD)
 - Card Payments

2. Payment System

- **Card payments should be processed through the website**
- All card payments must be **deposited directly into the platform owner's business bank account**
- The platform will **hold the payment and transfer seller earnings weekly**
- The platform will **deduct a 10% commission from each sale**

3. Seller Subscription Model

- Sellers can **use the platform free for the first 6 months**
- After 6 months, sellers must **purchase a yearly membership**
- Membership fee: **\$10 per year**

4. Admin Dashboard Requirements

The admin panel should include:

- Total sales overview
- Individual seller sales reports
- Commission tracking
- Transaction history
- Seller management
- Membership management
- Payment records

5. Seller Dashboard Requirements

- Product management
- Order management
- Sales report
- Earnings summary
- Store customization options

6. General Features

- Mobile-friendly website
- Secure payment gateway
- Easy product upload system
- Search and category system for products
- Customer account system
- Order tracking
